

CHRISTIAN HERITAGE COLLEGE

**MH240**

**THEORETICAL APPROACHES TO  
COMMUNITY MENTAL HEALTH CARE**

This sample unit outline is provided by CHC for prospective and current students to assist with unit selection.

Elements of this outline which may change with subsequent offerings of the unit include Content, Required Texts, Recommended Readings and details of the Assessment Tasks.

Students who are currently enrolled in this unit should obtain the outline for the relevant semester from the unit lecturer.

| <b>Rationale</b>                                 | <p>Statistics show that, in Australia, one in five people will experience some kind of mental health issue at some time in their lives. For some, this may be an isolated episode from which they will recover; however, many others find that their mental illness creates on-going difficulties for them and their families in their day-to-day living. Despite growing societal changes, people with mental illnesses still do experience marginalisation and stigmatisation. Although this is acknowledged as an on-going problem, more and more of those with mental health issues are finding their own voice.</p> <p>Against this background, community-based projects are beginning to replace more traditional problem focused, clinical interventions. Social action psychotherapy is encouraging those affected by mental illness, including families and carers, to be more aware of the unequal power dimensions often associated with traditional scientific models of mental health care. At the same time a greater understanding of the social causation of psychological distress is giving rise to preventative strategies.</p> |               |          |                                 |          |                        |          |              |                  |                                 |          |                        |          |              |                  |

|                                    |   |
|------------------------------------|---|
|                                    | <p>In this unit, students will examine and critique some of the historical approaches to mental health care. They will also be given the opportunity to evaluate contemporary understandings of mental illness and the innovative initiatives that are being designed to meet the mental health needs of twenty-first century Australian society. Students will also reflect on community mental health care from the perspective of Christian values, especially considering the therapeutic relationship and the concept of <i>shalom</i>.</p>  |
